                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Drosophila melanogaster (Fruit fly).

TISSUE SPECIFICITY: Expressed in embryonic ectoderm. In larvae,
expression is restricted to imaginal disks and brain.
DEVELOPMENTAL STAGE: Expressed throughout embryogeneeis where it
is first detected during gastrulation. Also expressed in larvae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Misra S., Crosby M.A., Mungall C.J., Matthews B.B., Campbell K.S., Hradecky P., Huang Y., Kaminker J.S., Millburn G.H., Prochnik S.E., Smith C.D., Tupy J.L., Whitfield B.J., Bayraktaroglu L., Berman B.I. Natl. Acad. Sci. U.S.A. 99:14422-14427(2002).
-!- CATALYTIC ACTIVITY: ATP + L-arginine + tRNA(Arg) = AMP + diphosphate + L-arginyl-tRNA(Arg).
-!- SUBUNIT: Monomer (By similarity).
-!- SUBUNIT: Monomer (By similarity).
-!- SUBCELLULAR LOCATION: Oftoplasmic.
-!- SUBCELLULAR Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                               15-WAR-2004 (Rel. 43, Created)
15-WAR-2004 (Rel. 43, Last sequence update)
15-WAR-2004 (Rel. 43, Last annotation update)
Arginyl-tRNA synthetase (EC 6.1.1.19) (Arginine--tRNA ligase) (ArgRS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The characterization of two insect defensins: immune and characterization of two insect defensins: immune peptides from the mosquito Addes aegypti.";

Proc. R. Soc. Lond., B. Biol. Sci. 261:217-221(1995).

- Proc. R. Soc. Lond., B. Biol. Sci. 261:217-221(1995).

- Proc. R. Soc. Lond., B. Biol. Sci. 261:217-221(1995).

- FUNCTION: Antibacterial peptide mostly active against Gram-postitive bacteria.

- SUBCELLULAR LOCATION: Secreted.

- ITISSUE SPECIFICITY: Hemolymph.

- IDSUED.PRINTAL STATES: Expressed 30 minutes after infection and remained present through to 21 days. Expressed in white or callow pupae during metamorphosis, but no expression was seen in larvae.

- INDUCTION: By bacterial infection.

- POLYMORPHISM: There are two defensin C isoforms, C1 (shown here)

New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.

Disclosure; Page 17; 37pp; English.

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human discary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipse (HPL) or human gastric lipse (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is a complementarity determining region 3 (CDR3) of llama species (camelid) antibody VHH region

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is a complementarity determining region 3 (CDR3) of llama species (camelid) antibody VHH region
                                                                                                          Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; miman dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight; complementarity determining region 3; CDR3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #30 from lama (camelid) species

Sequence 130 AA;

Example 2; Page 10; 37pp; English.

Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight; complementarity determining region 3; CDR3.

Llama species antibody VHH CDR3 #10.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting numan dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipse (HPL) or human gastric lipse (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #12 from llama (camelid) species
                                                                                 Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is a complementarity determining region 3 (CDR3) of llama species (camelid) antibody VHH region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antibody; camelid; anorectic; heavy chain variable domain; VHH; dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL; human gastric lipase; HGL; cosmetic control; body weight.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #14 from lama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Llama antibody, camelid, anorectic, heavy chain variable domain, VHH, uhuman dietary enzyme inhibitor; medicament; human pancreatic lipase; HPL, food; human gastric lipase; HGL, cosmetic control; body weight; complementarity determining region 3; CDR3.
                                                                                                                                                                                                                                                                                                                                                                       ntibody or its fragments for inhibiting human dietary enzymes, I for cosmetic control of body weight of human beings, comprises chain variable domain derived from immunoglobulin naturally devoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is a complementarity determining region 3 (CDR3) of llama species (camelid) antibody VHH region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Secreted protein, human; immunosuppressive, antiarthritic; antirheumatic; antiprollerative, eytostatic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; ophthalmological; vulnerary; gene therapy; treatment; autoimmune disease; hyperprollerative disorder; cardiovascular disorder; cardiovascular disorder; cerebrovascular disorder; nervous system disorder; infection; skin aging; wound healing; epithelial cell proliferation; transplantation; skin aging;

This invention describes novel isolated nucleic acid molecules (1)
encoding a human secreted proteins (II) which have immunosuppressive,
antistribritic, antirhenuatic, antiprofilerative, cytostatic, cardiant,
vasotropic, cerebroprotective, nootropic, neuroprotective, antibacterial,
virucide, fungicide, ophthalmological and vulnerary activity and can be
used for gene therapy. (I) and (II) are used to prevent, treat or
used for gene therapy. (I) and (II) are salso used in
diagnosing a pathological condition in e.g. humans, mice, rabbits, goats,
horses, cats, dogs, chickens or sheep. (I) and (II) are also used in
diagnosing a pathological condition or susceptibility to a pathological
condition. The antibodies to (II) can also be used in alleviating
symptoms associated with the disorders and in diagnostic immunoassays
e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA).
Disorders which are diagnosed or treated include autoimmune diseases e.g.
rheumatoid arthritis, hyperproliferative disorders e.g. cardiac arrest,
cerebrovascular disorders e.g. cerebral ischemia, anglogenesis, nervous
system disorders e.g. Alzheimer's disease, infections caused by bacteria,
viruses and fungi and ocular disorders e.g. cardiac arrest
colliferation, to prevent skin aging due to sumburn, to maintain organs
before transplantation, for supporting cell culture of primary tissues,
to regenerate tissues and in chemotaxis. The polypeptides can also be
to regenerate tissues and in chemotaxis. The polypeptides
to regenerate tissues and in chemotaxie to increase or decrease storage Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and Parkinson's diseases and cancers. Disclosure; Page 404-405; 418pp; English capabilities

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

Claim 1; Page; 1017pp; English

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, or human polynucleotides or a polynucleotide acid sequence. Also claimed are a vector comprising the movel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method; an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the regulates the activity of one or more of the cativity in an animal of one or mean of the polypeptides given in the specification, a method for identifying a compound useful in treating contribution, and a pharmaceutical composition comprising the or or more of the cativity is useful for preparing a medicament for treating collypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating collypeptides or their antibodies. The polymucleotide or the compound that the regulates the activity is useful for preparing a medicament for treating collypeptides or their antibodies. The polymucleotide or the compound that the regulates the sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at compound the part of the propersed development of the propersed development of the propersed

(3) an isolated

```
continued actual (1) an antibody capable of specifically binding antisense nucleic actd; (4) an antibody capable of specifically binding cantisense nucleic actd; (4) an antibody capable of specifically binding cantisense nucleic (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the agene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene product for cellular proliferation or the biological services or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a companion acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits states the product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for proliferation in cells other than S. typhimurium, control discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, the target prokaryotic essential genes. Note: The sequence data for this proliferation fermat directly from Wilpo at the printed specification, but was obtained for the wind int/wh/hublished not sequence as a for the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antisense nucleic acids, useful for identifying proteins or screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 727;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

the 6213 antisense sequences given in the specification where expression of the muchec acid inhibits proliferation of a cell. Also included are:

of the muchec acid inhibits proliferation of a cell. Also included are:

closed a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular proliferation or the activity of a gene in an operon required for luciplication or that has an activity against a biological pathway required for that has an activity against a biological pathway required for that has an activity against a biological pathway in which a proliferation or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation of the pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits prolification of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound, a activity; (11) a culture comprising strains in which the gene or medication of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound, a clivity; (11) a culture comprising strains in which the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the contrains; or (13) identifying the target of a compound acids required for collection of an organism. The antisense nucleic acids are useful for for cellular proliferation of an organism are candidate molecules got are useful for for cellular proliferation of an organism or candidate molecules for a candidate molecules for a citiental acids required for cellular candidate molecules for a candidate molecules for a candidate molecules for a candidate molecules for a candidate molecules activity and a candidate and candidate molecules for a candidate activity 
                                                                                                                                                                                                                                                                                                           New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid comprising any one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        60.3%; Score 41; DB 6; Length 961; 70.0%; Pred.                                                                                                                                                                                    The first needs to an isolated muciacis acid comparising any one of the 6213 antisease sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisease nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisease nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway concludent for proliferation or that has an activity against a biological pathway in which a proliferation or the the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) prolifing the extent to organism acts; (9) manufacturing an antibiotic; (10) prolification of an organism acts; (9) manufacturing an antibiotic; (10) prolification of an organism acts; (9) manufacturing an antibiotic; (10) prolification of an organism; or (13) identifying the target of a compound that inhibits the towhich each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the confident is overappressed or underexpressed; (12) determining for solidate molecules for rational dangines or proliferation in cells other than S. aureus, S. typhimurium, C. prequired for proliferation in cells other than S. aureus, S. typhimurium, C. the present dayed prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .;
                                                                                                                                                                        The invention relates to an isolated nucleic acid comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 41; DB 6; Length 944;

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16803(2002).
-!- FUNCTION: Acts as a transcriptional repressor. Interacts with MXII
- to repress MYC responsive genes and antagonize MYC oncogenic
activities. Interacts with MAD-MXX heterodimers by binding to MAD.
The heterodimer then represses transcription by tethering SIN3B to
DNA. Also forms a complex with FOXKI which represses transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -I. SUBUNIT: Interacts with FOXKI/MNF, MXII and MAD (By similarity).
-I. SUBCELLUIAR LOCATION: Nuclear (By similarity).
-I. SIMILARITY: Contains 3 PAH (paired amphipathic helix) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TISSUE=Brain;

Cur. (Genet. 30:83-88(1996).
-!- CATALYTIC ACTIVITY: N-(5-phospho-beta-D-ribosyl)-anthranilate = 1-
(2-carboxyphenylamino)-1-deoxy-D-ribulose 5-phosphate.
-!- PATHWAY: Tryptophan biosynthesis; third step.
-!- SIMILARITY: Belongs to the tryP family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-MAY-1992 (Rel. 22, Created)

-:- FUNCTION: ACTS ON LACTALDEHYDE AS WELL AS OTHER ALDEHYDES.
-:- CATALYTIC ACTIVITY: (S)-lactaldehyde + NAD(+) + H(2)O = (S)-
-:- SUBNUHT: Homoretramer.
-:- SUBNUHT: HOMORETRANE.
-:- INDUCTION: BY GROWTH ON FUCOSE, RHAMNOSE, ARABINOSE AND AMINO
ACIDS SUCH AS GLUTAMATE.
-:- SIMILARITY: Belongs to the aldehyde dehydrogenase family.
                                                  SEQUENCE FROM N.A.

The combaint sensitive H.K.-Arpase: tissue-specific expression of the mammalian genes encoding the catalytic alpha subunit.";

The companies encoding the catalytic alpha subunit.";

TEBS Lett. 440:320-324(1998).

The FEBS Lett. 440:320-324(1998).

The FONTION: Catalyzes the hydrolysis of ATP coupled with the exchange of H(+) and K(+) ions across the plasma membrane.

The CATALYTIC ACTIVITY: ATP + H(2)0 + H(+)(In) + K(+)(out) = ADP + Dibosphate + H(+)(out) + K(+)(In).

The SUBCRITIC Composed of two subunits: alpha (catalytic) and beta.

The SUBCRITICITY: Found in skin, kidney and distal colon.

The SUBCRITICITY: Found in skin, kidney and distal colon.

The SUBCRITICITY: Found in skin, kidney and distal colon.

The SUBCRITICITY: Belongs to the cation transport ATPases family (P-type ATPASES).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. J. Gen. Microbiol. 139:307-316(1993).
-!- FUNCTION: THIS ENZYME CAPALYZES THE ENDOHYDROLYSIS OF 1,4-BETA-GLUCANS. PRINCIPALLY ACTIVE AGANTST BARLEY BETA-GLUCAN.
-!- CATALYTIC ACTIVITY: Bndohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and cereal beta-D-glucosidic linkages in cellulose degradation.
-!- PATHWAT: Cellulose degradation.
-!- SATHWATY: Belongs to cellulase family E (family 9 of glycosylhydrolases).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bacteria; Firmicutes; Clostridia; Clostridiales; Clostridiaceae;
Clostridium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   reducing archaeon Archaeoglobus fulgidus.";
Nature 390:364-370(1997).
-!- FUNCTION: One of the primary rRNA binding proteins, it binds directly to 165 rRNA central domain where it helps coordinate assembly of the platform of the 308 subunit (By similarity).
-!- SUBUNIT: Part of the 308 ribosomal subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "The complete genome sequence of the hyperthermophilic, sulphate-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -!- SUBINIT: Part of the 30S ribosomal subunit.
-!- SIMILARITY: Belongs to the S8P family of ribosomal proteins.

De Haard JJW,

New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.

Claim 4; Page 29; 37pp; English.

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HBL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is a complementarity determining region 3 (CDR3) of llama species (camelid) antibody VHH region

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5481 sequences (S1), given in the specification. The proteins have antibacterial and antihilammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and tibodies that bind (I) are used in the manifacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a biological sample. (I) is aced to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be moningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity characteraphy, immunoassays, and distinguishing/identifying
                                                                                                                                                     Streptococcus, GAS, GBS, group B streptococcus, Streptococcus agalactiae, group A streptococcus, Streptococcus pyogenes, antibacterial, antiinflammatory, infection, vaccine, meningitis, gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New Streptococcus protein for the treatment or prevention of infection disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (51), given in the specification. The proteins have antibacterial and antiinflammatory activity. (1), nucleic acids encoding (1), ABN66044-ABN71526 and antibadies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (1) are used to detect Streptococcus in a biological sample. (1) is used to detecraine whether a compound binds to (1). A composition composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acids encoding (1) may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                       Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Telford J, Masignani V, Margarit Y Rosl, Grandi G, Fraser C, Tettelin H,

The present invention provides the protein and coding sequences of proteins from Moraxella catarrhalis. These can be used to produce vaccines which protect against M. catarrhalis infection, which can cause otitis media, respiratory infection, sinusitus, and pneumonia. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                              Moraxella, vaccine, respiratory tract infection, antiinflammatory, auditory, antibacterial, otitis media, sinusitis, pneumonia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Moraxella polypeptide and polynucleotides useful as vaccine for immunizing a host e.g. humans against disease e.g. otitis media, pneumonia, caused by infection of the bacteria.

Novel human polypeptides and polynuclectides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ Claim 10; Page 1400; 2508pp; English 24-MAY-2001; 2001WO-US017076. 24-MAY-2000; 2000US-0206690P Leach MD, Shimkets RA; (CURA-) CURAGEN CORP. WPI; 2002-106200/14. N-PSDB; ABN77344. transplantation.

Sequences ABP31028-ABP35561 represent 4534 novel human proteins designated ORF (open reading frame) 1-4534, and sequences ABN75054ABN75587 represent conding them. The invention also encompasses polypeptides at least 80% identical to the ORPT-ORR4534 (collectively referred to as ORFX) proteins, polynucleotides at least 85% identical to the ORPT-ORR4534 (collectively referred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX polynucleotides, the recombinant production of ORFX polynucleotides and polynucleotides for screening for modulators of ORFX pression or activity, and methods of screening for modulators of ORFX expression or activity, and methods of screening for modulators of ORFX expression or activity, and methods of screening individuals for a predisposition to an ORFX associated disorder. The ORFX protein, cell proliferation, call differentiation, immune modulation, haematopoiesis regulation, cell differentiation, immune modulation activity, thrombolyptic activity, chemokinetic activity, haemostatic activity, thrombolyptic activity, receptor/ligand, antinflammatory activity, thrombolyptic activity,

and antilinfective activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour ORFX proteins, rucleic acids and antibodies may be used in the treatment of cancers, other proliferative disorders may be used in the treatment of cancers, other proliferative disorders may be used in the treatment of cancers, correctly and all provided the cancers of cardiovascular diseases, immune system disorders disorders related to candiovascular diseases, and infectious diseases caused by viral, bacterial, diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester storage diseases, and infectious diseases caused by viral, bacterial, storage diseases, and infectious diseases caused by viral, bacterial, storage diseases, and probes, in the detection of ORFX genomic sequences or transcripts, in the identification and cloning of homologous corrected may additionally be used to produce transgenic animals necleic acids may additionally be used to produce transgenic animals which may be useful for studying the function and/or activity of ORFX protein, and in drug screening. The ORFX protein, and in drug screening. The ORFX protein may also be used as immunogens to generate specific antibodies, which are useful in the immunogens to generate specific antibodies, which are useful in the diagnosis, treatment and monitoring of ORFX-associated diseases \$

Pseudomonas putida aldehyde dehydrogenase.

Aldehyde dehydrogenase, NAD+-dependent, oxidation, 2-oxoaldehyde, hydroxypyruvaldehyde, glyceraldehyde, methylglyoxal, hydroxypyruvic acid.

Pseudomonas putida

24-AUG-1998; 29-FEB-2000.

(CHIK-) ZH CHIKYU KANKYO SANGYO GIJITSU KENKYU

This sequence represents a novel aldehyde dehydrogenase from Pseudomonas putida. This catalyses reactions such as the NAD-dependent oxidation of hydroxypyruvaledhyde to hydroxypyruvic acid and reacts specifically with 2-oxoaldehydes such as hydroxypyruvaldehyde, glyceraldehyde and methylglyoxal. The protein was initially purified from a culture of P. putida, and subjected to tryptic cleavage. The fragments thus obtained were sequenced, and the sequence information used to design primers were used to amplify a aldehyde dehydrogenase PCR product. The fragment was used in the detection of a full-length DNA encoding aldehyde dehydrogenase in a genomic library.

New aldehyde dehydrogenase gene - for enzymatic synthesis of serine or cysteine from glycero

Claim 2; Page 8-9; 11pp; Japanese.

```
The invention relates to an isolated mucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense artisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation, or the blological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the blological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a

·.
compound's activity; (11) a culture comprising strains in which the gene product is oversypressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational required for proliferation in cells other than S. alreaus, S. typhimulium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Jerusalem artichoke 1-fructan:fructan fructosyltxansferase (FFT) catalyses a polymerisation reaction involving the transfer of fructosyl units between trisaccharides, tetrasaccharides and larger fructose polymers. Its amino acid sequence was deduced from a CDNA clone (AAT31025) isolated from a Jerusalem artichoke tuber cDNA library. The enzyme can be expressed in transgenic plants to modify the fructan profile. The fructans are useful as low-calorie sweeteners or as the hydrophilic moiety in biosurfactants. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA sequences encoding fructan-producing enzymes - used to transform plants, for the production of low calorie sweeteners etc.

The present sequence represents the Japanese yam mosaic virus (JYMV) JYMV mosaic virus. The present invention also describes: (1) a weakly toxic strain of Dioscoreaceae mesaic virus having a nucleic acid sequence which shows interference against the infection of a strongly toxic strain of Dioscoreaceae mesaic virus; (2) a Dioscoreaceae mesaic virus; strongly toxic strain of Dioscoreaceae mesaic virus; (2) a Dioscoreaceae mosaic virus; (3) a method for the cultivation of a Dioscoreaceae mosaic virus; (3) a method for the cultivation of a Dioscoreaceae mosaic virus; (3) a method for the cultivation of a Dioscoreaceae mosaic virus; is infected to the tubercle or the University toxic strain of Dioscoreaceae mosaic virus is infected to the tubercle or the University of Dioscoreaceae appoints, and (4) a method for genetic alata and the tubercle or bulbli is grown; and (4) a method for genetic diagnosis of a Dioscoreaceae mosaic virus in which a DNA fragment C muplified by using reverse transcriptese-polymerase chain reaction (RT-PCR) primers atagettacacaccecteae (AAR26999) and cacedtacattgeygaragyge (AAR32201) is treated with a restriction enzyme to distinguish the weakly to of physocoreaceae mosaic virus from the strongly toxic strain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Weakly toxic strain of Dioscoreaceae mosaic virus used in the genetic diagnosis of the mosaic virus infection and for the management of crops resistant to the virus.
                                                                        Gaps

Cancer-associated nucleic acid molecules (N) and proteins (P), where the cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens in the colon cancer antigens and the colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAM37196 and AAM37708 represent sequences used in the exemplification of the present invention. N B. Pages 66 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0

Antisense, prokaryotic essential gene, cell proliferation; drug design. New antisense nucleic acids, useful for identifying proteins or scre for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. Claim 25; SEQ ID NO 60345; 1766pp; English 06-SEP-2001; 2001US-00948993. 25-OCT-2001; 2001US-0342923P. 08-FEB-2002; 2002US-00072851. 21-MAR-2002; 2002WO-US009107 06-MAR-2002; 2002US-0362699P 21-MAR-2001; 2001US-00815242 (ELIT-) ELITRA PHARM INC. Listeria monocytogenes Zamudio C, Trawick JD, WPI; 2003-029926/02 N-PSDB; ACA36291 40200277183-A2 03-OCT-2002 Wang L, Wall D, The present invention relates to the genome sequence of Listeria
monocytogenes EGD-e (see ABA33041). The genome sequence and fragments of
it are useful for selecting probes and primers for detecting genes in L.
conveytogenes and related organisms, and for studying genetic
monocytogenes and related organisms.

Comparisms and other genomes The present invention. Proteins
expressed from the genome sequence of the present invention. Proteins
expressed from the genome sequence of the present invention. Proteins
expressed from the genome sequence and useful for ralating specific
antibodies, identification of L. monocytogenes and related organisms, and
for biosynthesis and biodegradation, especially biosynthesis of Vitamin
B12. The genome sequence and proteins encoded by it are also useful for
selecting compounds that regulate gene expression and cell replication
and modulate L. monocytogenes-related diseases. In addition, the genome
sequence and proteins encoded by it are useful in pharmaceutical and
vaccines compositions for the treatment or prevention of infections by L.
monocytogenes and related organisms. Note: The sequence data for this
parent did not form part of the printed specification, but was obtained
in electronic format directly from WIPO at Genomic sequence for Listeria monocytogenes, useful e.g. for treatment and prevention of Listeria and related bacterial infections, and related Buchrieser C, Frangeul L, Couve E, Rusniok C, Fsihi H, Dehoux P; Dussurget O, Chetouani F, Nedjari H, Glaser P, Kunst F, Cossart P; Daniels J, Goebel W, Kreft J, Kuhn M, Ng E, Vazquez-Boland JA; Dominguez-Bernal G, Garrido-Garriar P, Tierrez-Martinez A, Amend A; Chakraborty T, Domann E, Hain T, Berche P, Charbit A, Durant L; Perez-Diaz J, Baquero F, Garcia Del Portillo F, Gomez-Lopez N, Maduenio E, De Pablos B, Wehland J, Kaerst U, Entian K, Hauf J; Antibacterial; gene therapy; vaccine; biosynthesis; biodegradation; vitamin B12; bacterial infection; disease. ftp.wipo.int/pub/published\_pct\_sequences Claim 6; SEQ ID NO 347; 192pp; French. 11-APR-2001; 2001WO-FR001118. 11-APR-2000; 2000FR-00004629. Malone C, Carr GJ,

The invention relates to an isolated nucleic acid comprising any one of the foll antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid conditions are coll containing the vector; (3) an isolated are:

(1) a vector comprising a promoter operably linked to the nucleic acid conditions acid; (2) a host cell containing the vector; (3) an isolated antisense nucleic acid; (4) an antibody capable of specifically binding confisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular proliferation or the activity of agene in an operon required for proliferation; (7) identifying a compound that influences the activity of required for proliferation, or that has an activity against a biological pathway required for proliferation or the piological pathway in which a proliferation-required gene or the biological conspands acts; (9) manufacturing an antibits proliferation of an organism acts; (9) manufacturing an antibits proliferation of an organism acts; (1) identifying the target of a compound that inhibits proliferation of an organism; or (1) identifying the target of a compound that inhibits the extent or to which each of the strains is present in a culture or collection of an organism; or (1) identifying the target of a compound that inhibits the constraints or screening for homologous nucleic acids are useful for the dense product is observed to be actived manufacturing an entisense nucleic acids actuals actuals and any dense product is organism. The antisense nucleic acids are useful for each of the recent of the recent endidated molecules for rational and dense product acids actuals and acids actuals and acids ö drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences Gaps ; 0 Length 407; 57.4%; Score 39; DB 6; Length 407 63.6%; Pred. ```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL3175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                 Drosophila; developmental biology; cell signalling; insecticide; pharmaceutical.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed carivity of (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a pulppeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders or polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG3037 represent novel human diagnostic maino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
